

# How to KEEP PIPES FROM FREEZING

## WHEN IT'S REALLY REALLY COLD OUT

### Turn up the Heat

Keep the temperature in your home above 65 degrees Fahrenheit or 18 degrees Celsius during a deep freeze

STEP  
01

STEP  
02

### Let Water Drip

Running water through the pipe relieves pressure buildup

### Open Cabinets

Keep cabinet doors under sinks open to allow warmer house air to circulate

STEP  
03

STEP  
04

### Use a Heater

Use a space heater to keep the water in pipes from freezing in unheated spaces

### Turn Off Water

Shut off your water at the main shutoff to eliminate the risk of frozen pipes
